

# WASTE PLASTIC RECYCLING

with Carbon Conversion Group

## About

At True Star Energy, we are committed to environmental sustainability and the generation of wealth from waste. CCG's innovative technology transforms non-recyclable plastic waste into valuable commodities, presenting an attractive opportunity for economic growth and environmental stewardship for Native American Tribes.

## Materials We Produce

By harnessing CCG's technology, tribes can convert the plastic waste that often accumulates on reservations into high-demand resources such as:

- Graphene
- Graphite
- Carbon nanotubes
- Green hydrogen fuel

This not only provides a sustainable solution for waste management but also creates potential revenue streams.

**CCG's machines can be installed in a variety of locations, including but not limited to:**

- ✓ Industrial Parks
- ✓ Community Centers
- ✓ Local Businesses
- ✓ Casinos
- ✓ Educational Institutions
- ✓ Waste Management Facilities

**Sustainable solution for managing the plastic waste**

**Additional Revenue Streams**

**Clean, Renewable Energy Source**

**Environmental Stewardship**
